Dolce Benessere

Foscaris is a confectionery workshop based on health integration. It is located in the medieval village of Pascelupo, where it creates "sweet crystals of well-being", according to the ancient creative art of handmade candy. It formulates exclusive recipes by mixing potions of health-giving herbs, vegetable extracts, essential oils and superfoods. Thus creating sweetness for people's well-being, according to the strictest artisan principles.

Research project and continuous experimentation, to create innovative confectionery products

Monte Cucco Natural Park

Umbria

An aerial photograph of a medieval village, Pascelupo, nestled in a lush green forest. The village is built on a hillside, with several buildings visible, including a prominent yellow building. The surrounding area is covered in dense, vibrant green trees. The text "Village of sweetness and Well-being" is overlaid in white serif font at the top of the image.

Confectionery Laboratory of Well-being

*We are an innovative company in the confectionery sector, specialized in high quality foods for well-being. We were born with a new business idea, on people-oriented, surrounded by the green, to create unique products that can help improve people's lives. In the ancient medieval village of Pascelupo, in the Natural Park of Monte Cucco, in Umbria, we have created the **first Confectionery Laboratory of Well-being**: a place that inspires peace and meditation, where nature regenerates it self thanks to the absence of man. This enchanted landscape, almost mystical, frames our story and invites us to reflect on the various needs of modern man, on the importance of a balanced diet and how we can contribute. With these prerequisites our products are born, completely hand-made, in an extraordinary combination of tradition and innovation. We are aware that we have started a path of change for the sector, contributing to create the confectionery products of the future*

A NEW COMPANY IDEA

We have dreamt of transforming the world of candy:
an innovative vision that looks towards the future.

We have created the first integrated candies, a range of products for new
and specific purposes that are useful for human health and well-being.

RAW MATERIAL

Isomalt & Maltitol

Isomalt

Isomalt is a sugar substitute, used mainly for its physical characteristics similar to sugar; it is combined with different substances in order to obtain a sweet mixture. It has little impact on blood glucose levels and does not lead to dental decay. It contains half of the calories of sugar but excessive use may cause risks related to gastric disorders including flatulence and diarrhea: do not exceed 50 g. per day in adults and 25 g. in children.

Maltitol

Maltitol is a natural product obtained from hydrogenated maltose syrup. Used as a sweetener, it reduces the formation of dental plaque and, consequently, the risk of dental decay. One gram of Maltitol corresponds to about 2.4 Kcal compared to the 4 Kcal of Sucrose, therefore it helps to control energy intake. Thanks to its glycemic index of 53% compared to sucrose and an insulin index of about 75% it is a more suitable substitute for diabetics. When taken in high doses it has a laxative effect.

Herbs & co.

The **Maca** is a plant of the Brassicaceae species and is used in popular medicine as a tonic to increase physical, as well as, mental faculties. Research has clarified that the root has a significant influence on libido in humans without changing the amount of circulating testosterone. It contains essential amino acids, minerals, vitamin C, iodine, polyunsaturated fatty acids. In women it may increase the production of estrogen that stimulates follicular production, thus, increasing fertility. It boasts aphrodisiac properties and increases male fertility. It creates a sense of satiety.

Damiana is a plant of the Turneraceae family; it has antidepressant properties and tonic stimulating action that can be used in case of physical or intellectual fatigue. It also possesses aphrodisiac properties, is a valid help in case of sexual asthenia and male impotence of a psychological origin, performance anxiety and premature ejaculation.

Guarana is a plant of the Spindaceae family; its seeds are rich in Guarantina, an active ingredient similar to caffeine. It is recommended as a stimulant in case of psychophysical fatigue, depression, asthenia and convalescence. In sports its extracts are successfully used to improve the ability to resist physical effort; it is also recommended to those who study to increase intellectual activity and, because it stimulates the production of enzymes capable of melting fat, it is also useful in diets.

Herbs & co.

Melissa is a perennial herbaceous plant of the Labiateae family. It has a calming and relaxing effect, with antispasmodic and anti-inflammatory properties and is useful to counter insomnia. It is normally used in states of anxiety, menstrual pain, neuralgia, digestion, nausea and headache due to nervous tension. If taken in large quantities it may have the opposite effect.

Linden (also commonly known as Lime) is a very long-living tree belonging to the family of the Tiliaceae. Its leaves and flowers are used in phytotherapy to combat insomnia, tachycardia, nervousness and headache caused by states of anxiety and stress, it produces a relaxing action on the circulatory system which helps to lower blood pressure. It is well tolerated in pregnancy, during breastfeeding and in children.

Chamomile is a plant of the Asteraceae family. It has been known since ancient times for its remarkable sedative and antispasmodic calming properties due to the presence of phyto-complex of flavonoids and coumarins which produce muscular relaxation. It is useful in the treatment of intestinal cramps, bad digestion, menstrual pain, nervous tension and stress.

Herbs & co.

Glucomannan, in its powder form, is derived from the root of konjac, a perennial herbaceous plant native to East Asia but also cultivated in Japan. The tuber contains a water-soluble fibre consisting of high molecular weight polysaccharide consisting of glucose and mannose. It has high viscosity and has the ability to absorb a lot of water becoming a gelatinous mass helping to promote satiety when consumed. In addition to its dietary effect it is also known for its ability to help control diabetes, triglycerides and cholesterol. It is also known for its laxative effect via mechanical-osmotic type.

Herbs & co.

Aloe has always been considered the queen of therapeutic plants, a panacea of all ills. It was used in ancient times to treat many diseases, it is mentioned in the Kamasutra for its aphrodisiac properties and it is said that Cleopatra also used it in her famous milk baths. Thanks to its active components this plant has gastroprotective properties, stimulates the immune system and has healing properties. Rich in trace elements it also has antioxidant properties with an antiradical power. Thanks to its steroids and Aloine it has anti-inflammatory properties and has antibiotic properties. It generates a laxative action and is not recommended for use in case of inflammation of the intestine or during the menstrual cycle.

Vitamin C (Ascorbic L acid) is an essential nutrient for humans. It is mainly found in foods of plant origin, especially citrus and sour fruits. It is useful for the immune system and as an antioxidant.

Herbs & co.

Ginseng is a perennial herbaceous plant of the eastern part of the world. Its root is used to improve alertness and the state of psychophysical well-being; it has been demonstrated to increase the capacity of arithmetic calculation, logical deduction, attention, reaction time and feeling of well-being, as well as relieving fatigue. It fights physical and mental fatigue, stimulates the immune system and also has been known to cure anxiety, insomnia and neuralgia.

Ginkgo biloba is the oldest plant on earth and can live up to a thousand years. The main components of the leaves are appreciated for their antioxidant properties as they are able to neutralize the free radicals which are responsible for oxidative stress, better known as aging. It has positive effects on improving cognitive and memory functions and is recommended for young people to increase their skills and the elderly as a prevention.

Herbs & co.

Spirulina is a blue-green unicellular microalgae. Already used in ancient times, it is a food source with the most complete nutritional profile of our planet. Because of its abundance in proteins, antioxidants, essential amino acids, vitamins, omega 6, omega 3 and minerals it is suitable for astronauts. It protects against free radicals and has some effect on appetite control.

Turmeric is a spice of Asian origin also known for its curative properties despite not being a medicine. Its active ingredient, Curcumin, which gives the ochre yellow color to the rhizome, is a powerful ally for the health and well-being of the organism. It has antioxidant, anti-inflammatory and painkiller, immunological, depurative and digestive properties.

LOLLY BIG

★PROJECT HAPPY CHILDREN'S

Our dream was to create healthy and beautiful sweets dedicated to children; with LOLLY BIG we have won the challenge: a new frontier of food for help children eat healthier; we have replaced the sugar with isomalt and maltitol, added a small quantity of honey which, above all, in winter, is an excellent natural tool for the immune system; we then added Vitamin C, Spirulina algae and Turmeric, coloring the all with fruit and vegetable concentrates, characterizing the tastes with natural flavors. The design particular and original, rigorously handmade in the ancient medieval village of Pascelupo, inside the natural park of Monte cucco.

COLLECTION

Honey Ambro

Intense honey, with a bouquet of aromas ranging from Mediterranean scrub to wax, from date to malt, from dry vegetable to resin, with floral notes.

Propolis is made up of a resinous substance that bees collect from the buds and bark of some trees; carries out numerous beneficial activities for the whole organism. The composition of caffeic acid and flavonoids makes it a powerful anti-inflammatory, with antiviral, healing, antifungal, immunostimulating, vasoprotective, prevention effects against colds and flu; it also offers immediate relief for sore throats.

Erisimo (scientific name *Sisymbrium Officinale*) is a plant belonging to the Brassicaceae family also known as 'singers' grass' thanks to its remarkable anti-inflammatory and antiseptic properties, capable of counteracting inflammation of the respiratory tract; it became popular especially among oratories, theater actors and singers during the Renaissance period thanks to its properties capable of treating even severe cases of aphonia. It has remarkable mucolytic and expectorant properties for the mucous membrane of the apparatus respiratory; it is recommended in the treatment of throat inflammations e situations of aphonia and dysphonia due to laryngitis, pharyngitis or tracheitis.

Echinacea, thanks to its immunostimulating properties, is one of the plants most sought after medicines in the Italian phytotherapeutic panorama; its capacity primary concerns the increase in resistance to infections, particularly useful in influenza states and in the prevention of colds; it has the ability to inhibit the hyaluronidase enzyme which degrades hyaluronic acid into its fundamental constituents. Thanks to these properties, echinacea is indicated in the treatment of colds, flu, herpes, bronchitis and as an adjunct in the treatment of urinary tract infections.
